Grand-Chukuchuku / GBHS Kumba

GOVERNMENT BILINGUAL HIGH SCHOOL KUMBA

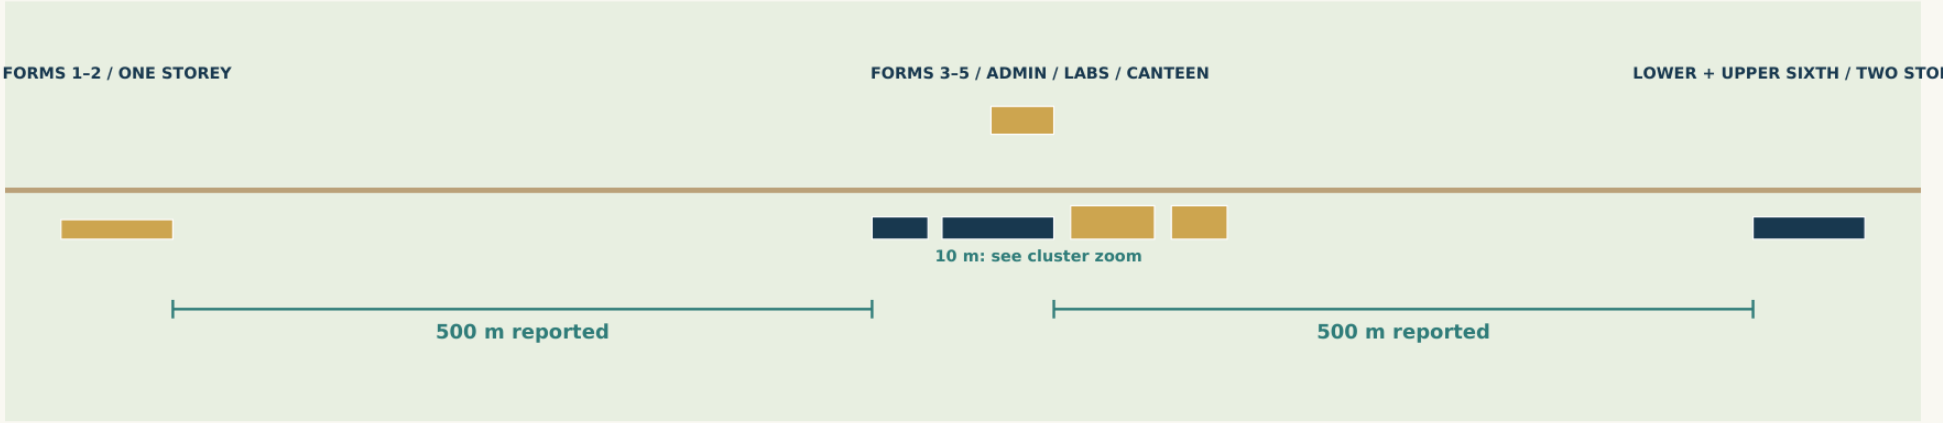
Six generated location references: two aerials, two side views and two student-eye views. An overall plan, a main-cluster plan and a badge construction reference accompany them.

Based on the author's recollections. Architecture, materials, terrain, footprints and camera positions are proposals for the animated series; these are not photographs of the real campus. Confirmed relationships and unresolved measurements are distinguished in the source notes.

Overall campus / reported distances

GBHS KUMBA / OVERALL CAMPUS

Reconstruction from the author's account. Building footprints, orientation and gap endpoints are proposed; this is not an official site survey.



Blue = two-storey classroom blocks. Gold = one-storey blocks; admin/lab/canteen heights are proposed. The two 500 m values and 10 m separation come from the author; edge-to-edge placement is one proposed interpretation.

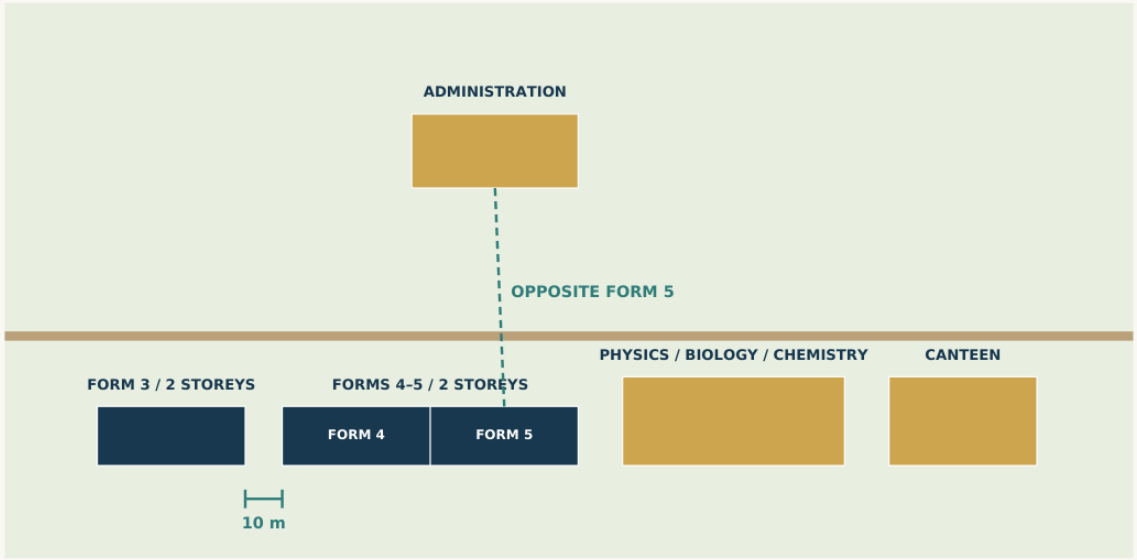
School is reported 10.7 km from Zino's compound. Road/footpath/straight-line basis and travel time remain open. Display orientation does not assert true compass bearings. GBHS Sixth Form facilities do not alter Zino's separate boarding-school chapter.

The second 500 m span includes the labs and canteen near Form Five. In this proposed geometry, open ground beyond the canteen is 376 m. Exact measurement endpoints remain open.

Main academic cluster / relationships

GBHS KUMBA / MAIN CLUSTER

Reconstruction from the author's account. Building footprints, orientation and gap endpoints are proposed; this is not an official site survey.



Blue = two-storey classroom blocks. Gold = one-storey blocks; admin/lab/canteen heights are proposed. The two 500 m values and 10 m separation come from the author; edge-to-edge placement is one proposed interpretation.

School is reported 10.7 km from Zino's compound. Road/footpath/straight-line basis and travel time remain open. Display orientation does not assert true compass bearings. GBHS Sixth Form facilities do not alter Zino's separate boarding-school chapter.

Form Three is confirmed as two storeys. Administration is opposite Form Five; labs are adjacent; the canteen is next to the labs. Footprints, court size and lab/admin/canteen heights are proposed.

A01 / Whole-campus oblique aerial

Three zones and two broad reported 500 m separations. Proposed orientation, footprints, terrain and building materials.

Generated reference / proposed architecture and camera. Do not measure building lengths or walking distances from this image. Perspective and background details are not a production-locked 3D model.

A02 / High-angle aerial

A second, higher aerial of the same three zones. The labelled overhead plan governs distances; this perspective is not a survey.

Generated reference / proposed architecture and camera. Do not measure building lengths or walking distances from this image. Perspective and background details are not a production-locked 3D model.

S01 / Forms Three–Five side view

Two-storey classroom blocks with the reported 10 m separation; lower lab and canteen volumes are proposed.

Generated reference / proposed architecture and camera. Do not measure building lengths or walking distances from this image. Perspective and background details are not a production-locked 3D model.

S02 / Lower and Upper Sixth side view

The GBHS Sixth Form building is two storeys. Its presence does not change Zino's separate boarding-school chapter.

Generated reference / proposed architecture and camera. Do not measure building lengths or walking distances from this image. Perspective and background details are not a production-locked 3D model.

E01 / The 10 m passage at eye level

A proposed camera position between the separate two-storey Form Three and Forms Four–Five blocks.

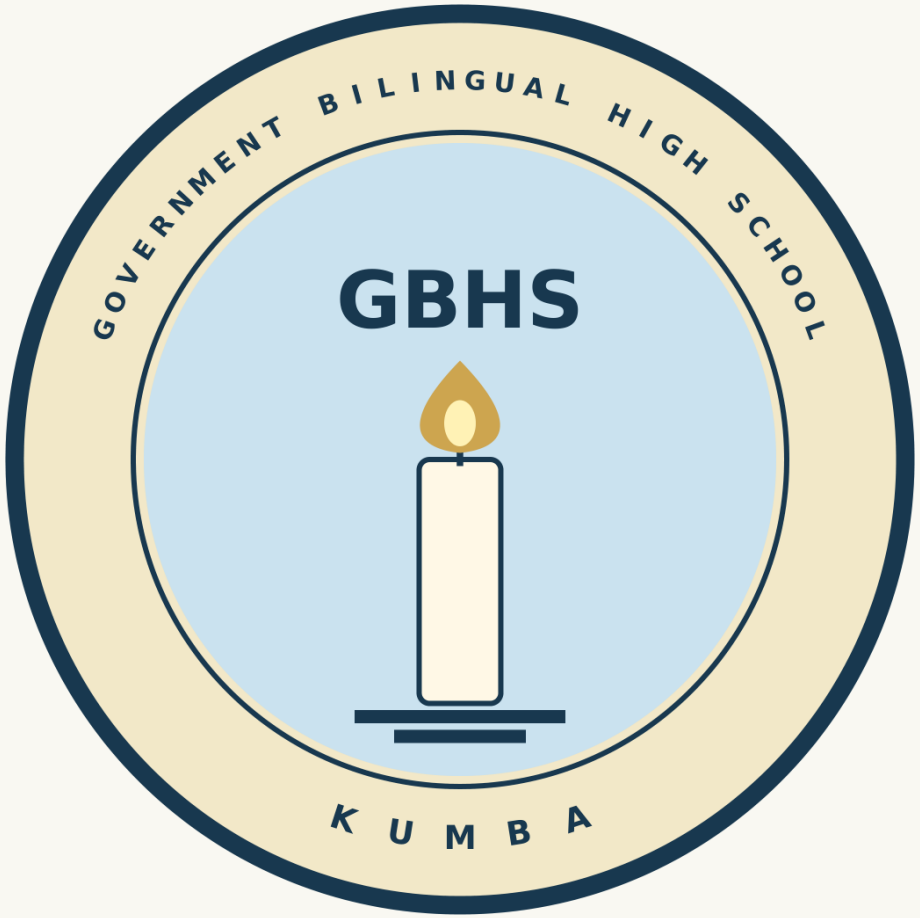
Generated reference / proposed architecture and camera. Do not measure building lengths or walking distances from this image. Perspective and background details are not a production-locked 3D model.

E02 / Administration, Form Five, labs and canteen

Administration opposite Form Five; the Physics/Biology/Chemistry laboratory block adjacent; food merchants next to the labs.

Generated reference / proposed architecture and camera. Do not measure building lengths or walking distances from this image. Perspective and background details are not a production-locked 3D model.

Daytime uniform / pocket and badge



SUPPLIED CONTENT

Circular badge: GBHS; Government Bilingual High School Kumba around the circle; lit candle in the centre.

PLACEMENT

Pocket on the wearer's LEFT chest: viewer-right in a frontal image. Respect books/arms covering the pocket. No badge on shirt backs.

WARDROBE

Sky-blue short-sleeved shirts; dark-blue trousers for boys and skirts for girls. Night revision at Professional School uses casual clothes, without school badges.

PROPOSED ARTWORK

Colours, border, typeface and candle drawing are a construction proposal, not a verified reproduction of the official crest. The vector reference preserves exact wording; tiny generated embroidery is approximate.

Continuity / source limits

AUTHOR-CONFIRMED

GBHS school name and reported 10.7 km compound distance. Forms One–Two: one storey. Form Three, Forms Four–Five and Lower/Upper Sixth: two storeys. Reported separations: 500 m, 10 m, 500 m. Administration opposite Form Five; Physics/Biology/Chemistry laboratories adjacent; canteen next to labs.

STORY BOUNDARY

GBHS Sixth Form facilities belong in the campus design. Zino's own two high-school years remain at a separate remote boarding school. Professional School remains a separate vocational/night-revision location.

PROPOSED / STILL OPEN

True bearings, gate and route, site boundary, footprints, classroom allocation, materials, topography and badge colours are not supplied. Distances are author-reported; measurement endpoints and the 10.7 km route basis/travel time remain open. Do not stage a short walk based only on the morning routine.

REVIEW AND NEXT USE

The primary agent inspected the six delivered images and three revised badge-bearing character assets. A first compact aerial and a later overhead trial with extra roofs were excluded. The delivered second aerial is explicitly high-angle, not vertical. Review notes accompany this package; no independent final critic sign-off is claimed after worker usage limits. Use the plans for layout and the images as material/camera proposals.
